

Summary Benefits

Key components of our governance services are:

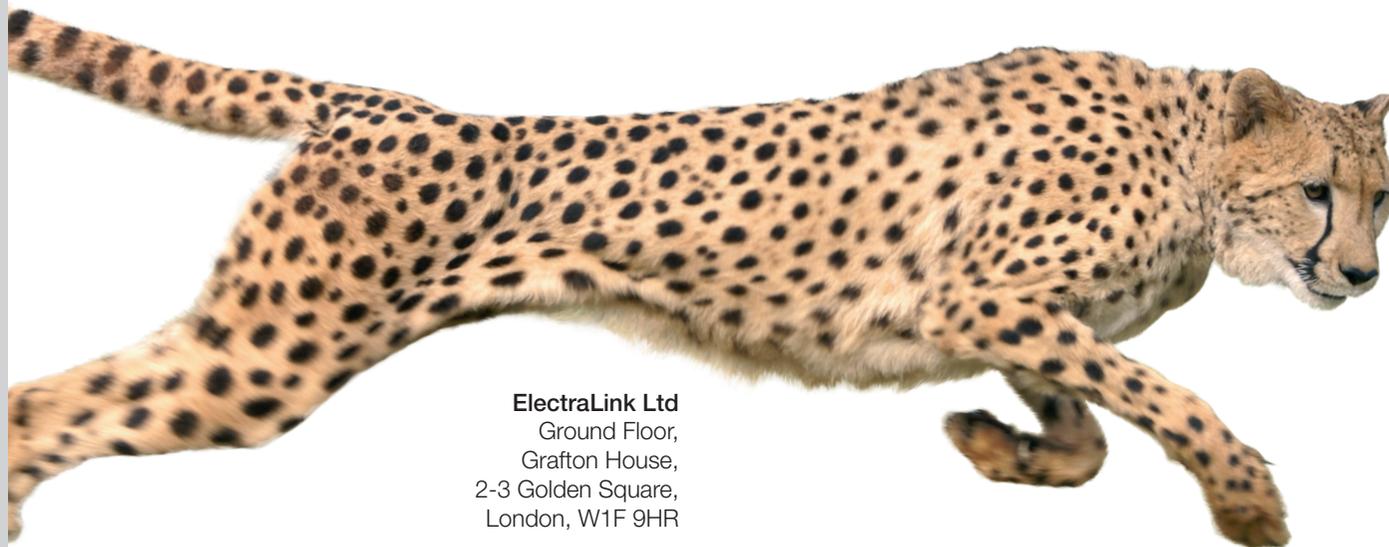

- **Expert Advice:** design, development, establishment and ongoing management of governance regimes
- **Change Control Administration:** ensuring the process is open, fair and transparent and engages industry at all levels
- **Document Maintenance:** ensuring standardisation, completeness and integrity
- **Assurance, Monitoring and Reporting:** ensuring parties comply with their obligations
- **Corporate and Financial Management:** controlling the cost of governance
- **Development and maintenance of websites:** ensuring open and transparent communication with industry
- **Model support:** support of industry charging models

Dedicated to supporting the data management and governance of the UK gas and electricity industries, ElectraLink provides a portfolio of services that offer uncompromising quality, value and expertise.

ElectraLink is the only organisation who provide such a composite package of services. A truly independent organisation owned by the UK's Electricity Distribution Network Operators (DNOs), we sit at the heart of the energy industry and have a unique capability to transfer and process energy data to both gas and electricity market participants.

ElectraLink in Governance Services

We are experts in setting up and delivering governance arrangements for both the gas and electricity industries.

We set the industry standard for service excellence with the quality, knowledge and cost effectiveness of our staff.

In addition to the provision of support of industry codes, agreements and associations, we also provide services in support of industry charging models, and are developing data services that improve the use of these codes and models through the application of data from the Data Transfer Network.

“ElectraLink delivers a high quality cost effective service against a comprehensive set of service level agreements, enabling DCUSA to deliver effective and efficient governance to its parties.”

Chris Allanson, DCUSA Panel Chair

Key strengths

The gas and electricity markets are complex, competitive, dynamic and evolving markets, particularly in the current Smart era. As such they require significant interaction between industry parties. To make these interactions work effectively and efficiently, robust governance arrangements need to be in place.

ElectraLink's combination of deep industry knowledge combined with cost effective operations, and a culture of quality delivery make us the natural provider of Governance Services to the energy industry.

ElectraLink currently provides governance services to the electricity industry supporting the key arrangements of DCUSA, DTSA and DCMF. In gas we support the agreement central to registration processes, SPAA.

Our expertise in governance spans commercial arrangements (DCUSA), system agreements (DTSA) and registration processes (SPAA). Our support to DCMF demonstrates we are expert in the emerging charging methodologies in electricity.
